

Technology *services.*

Next-generation software and AI agents, tailored to your business and kept in production. Fewer hours lost, a company in order, and peace of mind.

We are a service company.

A model built *around your business*

01

Applied AI, mastered

Software engineering is our discipline, and we now apply AI across its entire lifecycle, from design to production. That expertise serves a single purpose: delivering precisely what your business requires, with speed and rigor.

02

Beyond buy or build

The choice is no longer between off-the-shelf software that forces compromises and in-house development that strains your resources. We build software tailored to your operations, so your budget goes where it creates value.

03

A strategic run fee

Your run fee covers hosting, supervision, security, incident handling and continuous evolution. Unlike SaaS subscriptions, it funds software built for your business and owned by you, rather than licenses shared with thousands of other companies.

— Hours back every week — Processes that run themselves — Tools that stay in production — Peace of mind

What we build *and keep running*

Infrastructure

Cloud, hosting and security, operated for you.

Agent harnesses

Agents built for one domain, and kept on a leash.

Apps

Tailored web platforms, portals and mobile apps.

Odoo

Odoo implemented, extended, integrated and hosted.

Salesforce

Salesforce connected to how you actually sell.

Square

Square POS wired into your back office.

Local AI

An open model doing one task, fast and private.

Prototype to production

Hit the limits of your AI assistant? We take it from there.

Built with us, *still running.*

From LEGO to Vigi5, the software we built is still in production today.

35,000+	event guests managed on our platforms
30,000	orders processed by systems we built
800,000+	site visits a year
800+	employees equipped with our tools
99%+	uptime, around the clock
